

Evidence 5: Ablation Study — NOT AVAILABLE

NOT AVAILABLE

Controlled ablation study requires systematic re-training with per-component removal. Current V8 SupCon training was a single consolidated run with all components active.

Available component-level evidence:

S2 SinCos Azimuth: 67° MAE improvement

S3 Balanced Sampling: 27% → 49% pos ratio

S11 Dynamic Threshold: 0.0 → 1.0 recall

S12 Label Smoothing: gradient 1000× reduced
